

Company Profile

Products and Services

Maats Pipeline Equipment

For over 25 years, Maats is one of the leading suppliers of pipeline construction equipment and services to the pipeline industry. Maats supplies a wide variety of specialized construction machinery such as pipe layers, welding tractors, bending machines and related equipment, for new pipeline construction as well as for pipeline maintenance and -repairs.

Maats runs two specialized divisions, one for global sales purposes of new and used pipeline equipment (Maats B.V.), and one for the global rental of high quality machines for the construction of pipelines with all common diameters up to 60 inch (Maats European Pipeline Rentals B.V. (MEPR)). To have a local presence, Maats has a number of agents in different parts of the world and has established several regional companies with offices in Turkey (Maats Insaat) and Indonesia (PT. Maats). Combined with the vast network of Liebherr companies, Maats' presence is truly global.

Sales

Maats B.V. is the global sales representative for Liebherr pipeline equipment. Over the years Maats and Liebherr developed a program of pipe layers with a lift capacity ranging from 20 to 90 tons, and two sizes of welding tractors.

As Liebherr Components Sales Agent, Maats has access to a wide variety of high quality parts. Built with mainly Liebherr components, Maats has developed a range of pipe bending machines that are among the most powerful in the market. Furthermore Maats produces its own, fully certified, C-cradles and roller cradles for pipes ranging from 2 to 60 inch.

Laying

Maats B.V. is the official global representative for the sale of new Liebherr pipe layers. Liebherr and Maats developed a range of pipe layers with lifting capacities ranging from 20 up to 90 tons.

All machines feature the characteristic Liebherr hydrostatic drive and all new machine types are equipped with a fully enclosed cabin with ROPS structure as a standard. This provides a safe and conditioned working environment for the operator, making Liebherr pipe layers the safest and most reliable pipe layers currently available in the market.

Furthermore Maats has used pipe layers from several other manufacturers available for both rental and sale.

Maats produces its own roller cradles with capacities ranging from 12 to 68 inch. The roller cradles are equipped with double bearing rollers with a high resistant PU Vulkollan® covering.

In addition to the roller cradle program, Maats also produces C-cradles for smaller pipe sizes (2-12 inch).

Bending

Maats has developed and constructed a program of bending machines with a range from 16 to 60 inch. Built with mainly Liebherr components, these bending machines are currently the strongest available in the market.

To keep operation, maintenance and occasional repairs easy, the machine has a simple and straightforward layout. The use of Liebherr components in the machine makes it easy to obtain service- and spare parts, anywhere in the world.

In its rental fleet Maats has all sizes bending machines, suitable for pipes from 6 to 60 inch. All our machines are well maintained and in excellent working condition. For all bending machines Maats supplies matching bending sets, which can also be rented or purchased separately for use in other bending machines.

For all bending operations and common diameters, Maats can provide pneumatic and hydraulic bending mandrels.

Based on your pipe specification the mandrels are set to the correct wall thickness and will be delivered to your jobsite "ready-to-use".

Products and Services

Maats Pipeline Equipment

Maats takes pride in helping its customers developing and constructing new and innovative machinery based on specific customer needs. Years of experience in working with many different brands and types of equipment have resulted in an extensive technical expertise regarding specialized equipment used on pipeline construction jobsites. With this expertise, Maats makes sure that all new machinery is engineered and supplied in compliance with all applicable standards regarding health, safety and environment.

Rentals

With a comprehensive and high quality rental fleet of over 500 items Maats European Pipeline Rentals is the leading pipeline equipment rental company in Europe, and among the largest in the world. Maats markets its rental fleet from its head office in the Netherlands, conveniently located near the ports of Antwerp, Rotterdam and Hamburg. Our central location enables us to ship equipment to jobsites anywhere in the world quickly and easily. Maats puts great effort in keeping its rental fleet up to date. All machinery is supplied in the best condition and complies with the latest HSE-standards. Maintaining the standard of our rental fleet means that costs for wear and the odd repair on jobsites are kept to a minimum.

In addition to our general portfolio, Maats uses long term and trustworthy partners to provide any required equipment for its customers. This way Maats can provide the comfort of being a one-stop-supplier for your pipeline construction project, anywhere in the world. With over a quarter of a century experience in the supply of pipeline construction equipment, Maats has the proven expertise to successfully combine all sources and contribute an important extra value to their customer's projects.

Welding

Maats can supply an extensive package of equipment for your welding spread, including welding tractors, internal- and external line-up clamps, welding shelters and pipe facing machines.

Together with Liebherr, Maats has developed two different sizes Liebherr welding tractors. The Liebherr welding tractors / paywelders can be equipped with up to six welding sources. These welding sources are driven by a hydraulically powered generator with a standard capacity of 140 kVA (other capacities available). The generator is powered directly by the main engine of the welding tractor. As an option, a hydraulically powered compressor can be installed.

A compressor can be used to power an internal pneumatic line-up clamp (IPLC). Maats has all sizes IPLC's between 6 and 60 inch available for sale or rent.

In case the pipe joints have to be machined to prepare them for welding, Maats can supply a pipe facing machine. Together with a hydraulic power unit, a pipe facing machine can be used to machine all common and most complex bevels. There is even the possibility to directly power a pipe facing machine from a hydraulic PTO on a Liebherr pipe layer.

Various

In addition to the typical pipeline construction equipment, Maats has a number of machines that are either derived from pipeline equipment or that can complete the package of equipment needed on a pipeline construction jobsite.

Based on the Liebherr pipe layer, Maats can supply a conveyor belt shifter. With several special options and the easy joystick operation, the operator can keep his eyes on the conveyor belt in order to keep the risk of fracturing the rail to a minimum.

Besides providing you with a wide variety of equipment, Maats can also service your equipment. Maats has high quality workshops in different parts of the world that have seen it all. Maats can service or completely revise your pipe layers, bending machines, IPLC's or mandrels, from all common brands.

Contact

Maats has its headquarters in the Netherlands but established some regional companies in order to be closer to our customers. Together with our extensive agent network and all Liebherr dealers across the globe, Maats is represented truly globally.
